

ABOUT

I am a 4th-year Information Technology student at Damascus University, specializing in Front End Development with a focus on React. Proficient in HTML, CSS, and JavaScript, I am well-versed in the React ecosystem including MUI, Redux, Zustand, Jotai, Formik, and use-hook-form. Additionally, I am experienced with CSS frameworks and preprocessors such as Tailwind, Bootstrap, Sass, and Less. My familiarity extends to Astro and Three.js, and I also possess skills in backend development using Node. Alongside my expertise in React, I have explored other JavaScript frameworks like Vue, Solid, and Svelte. With a substantial aptitude as a problem solver, I have effectively contributed to various projects, demonstrating adaptability within both Agile and Waterfall teams. My collaborative workflow benefits from my proficiency with Git, aiding seamless teamwork and code management.
